

Claims

1. A portable organizer device comprising:

a calendar database;

a communication link configured to access an assignment record on an institutional system, the assignment record describing an assignment characterized by an estimated duration or a completion date;

a user interface configured to receive a user schedule constraint; and

an agent configured to create a calendar entry for the accessed assignment record in response to the user schedule constraint, and the estimated duration or the completion date.

2. The portable organizer device of claim 1, wherein the communication link is further configured to access an identification of an article required to perform the assignment, the agent further configured to associate the identification to the calendar entry.

3. The portable organizer device of claim 2, further comprising:

a sensor responsive to a unique identifying signal from an identification tag attachable to an article and operable to emit said unique identifying signal;

wherein the agent is further configured to initiate a notification on the user interface in response to the unique identifying signal.

4. A portable organizer device comprising:

a user interface;

a sensor responsive to a unique identifying signal from an identification tag attachable

to an article and operable to emit said unique identifying signal; and,

an agent configured to initiate a notification on the user interface in response to the unique identifying signal.

5. The portable organized device of claim 3, wherein the agent is further configured to initiate the notification in response to a comparison of the unique identifying signal and the article identification associated with the calendar entry.

6. The portable organizer device of claim 5, wherein the agent is further configured to initiate a missing article notification in response to not sensing the sensed unique identifying signal associated with the calendar entry.

7. The portable organizer of device of claim 5, wherein the agent is further configured to initiate an excess article notification in response to sensing another unique identifying signal having no association with the calendar entry.

8. The portable organizer device of claim of claim 1, wherein the user schedule restraint identifies available time blocks in the calendar database.

9. The portable organizer of claim 8, wherein the agent is further configured to identify available time blocks by applying a hierarchical set of appointments rules.

10. The portable organizer of claim 9, wherein the agent is configured to respond to the

hierarchical set of appointment rules from a group consisting of a minimum start time, a maximum end time, an earliest start date, a latest start date, a shortest session duration time, and a longest session duration time.

11. The portable organizer of claim 8, wherein the assignment record includes an estimated completion time, the agent is further configured to adjust the estimated completion time in response to a stored difficulty factor.

12. A portable organizer device comprising:

a calendar database;

a communication link configured to access and assignment record on an institutional system, the assignment record describing an assignment characterized by a difficulty factor and an estimated duration or a completion date;

a user interface configured to receive a user schedule constraint; and,

an agent configured to create a calendar entry for the accessed assignment record in response to the user schedule constraint, and the estimated duration or the completion date; and, monitor duration of completion of the assignment and to correspondingly adjust the stored difficulty factor.

13. The portable organizer of claim 8, wherein the agent is further configured to enter a plurality of calendar entries to complete the assignment.

14. The portable organizer of claim 13, wherein the agent is further configured to unallocate

15. The portable organizer of claim 13, wherein the agent is further configured to allocate an additional calendar entry associated with the assignment record in response to a failure to complete the assignment record.

1970	1971	1972	1973	1974	1975	1976	1977	1978	1979	1980	1981	1982	1983	1984	1985	1986	1987	1988	1989	1990	1991	1992	1993	1994	1995	1996	1997	1998	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	2037	2038	2039	2040	2041	2042	2043	2044	2045	2046	2047	2048	2049	2050	2051	2052	2053	2054	2055	2056	2057	2058	2059	2060	2061	2062	2063	2064	2065	2066	2067	2068	2069	2070	2071	2072	2073	2074	2075	2076	2077	2078	2079	2080	2081	2082	2083	2084	2085	2086	2087	2088	2089	2090	2091	2092	2093	2094	2095	2096	2097	2098	2099	2100	

16. A method of updating a calendar database, comprising:

accessing an assignment record on an institutional system, the assignment record describing an assignment characterized by an estimated duration or a completion date;

receiving a user schedule constraint; and

creating a calendar entry for the accessed assignment record in response to the user schedule constraint, and the estimated duration or the completion date.

17. The method of claim 16, further comprising:

accessing an identification associated with the assignment record of at least one article required to perform the assignment; and

associating the identification to the calendar entry.

18. The method of claim 17, further comprising:

sensing a unique identifying signal from an identification tag attached to an article and operable to emit a unique identifying signal; and,

notifying a user in response to sensing said unique identifying signal.

19. The method of claim 18, wherein notifying the user in response to sensing the unique identifying signal is further in response to comparison of the article identification associated with the calendar entry and the unique identifying signal.

20. A method of updating and entry in a calendar database, comprising:

sensing a unique identifying signal from an identification tag attached to an article and

operable to emit said unique identifying signal; and,

associating the identification within an entry in said calendar database.

21. An educational scheduling system, comprising:

an institutional system containing an assignment record on an institutional system, the assignment record describing an assignment characterized by an estimated duration or a completion date; and

a portable organizer device comprising:

a calendar database;

a communication link configured to access the assignment record on the institutional system;

a user interface configured to receive a user schedule constraint; and

an agent configured to create a calendar entry for the accessed assignment record in response to the user schedule constraint, and the estimated duration or the completion date.

22. The educational scheduling system of claim 21, wherein the communication link is further configured to upload to the institutional system a status message pertaining to the calendar entry.
